

Subham Saha

JAVA FULL STACK DEVELOPER

Mail subhamsaha59036@outlook.com | **LinkedIn** in/subham59036 | **GitHub** subham59036

Full Stack Developer with 2+ years of hands-on experience designing, building, and shipping resilient, scalable systems across the full product lifecycle. Passionate about clean architecture, observable systems, and end-to-end ownership — from database schema to production deployment.

EXPERIENCE

Full Stack Developer

2026 — Present

IIE Tech Club

- Designed and developed the official institutional website end-to-end, serving students, faculty, and administration.
- Built a clean React frontend prioritising accessibility and comfortable UX across desktop and mobile viewports.
- Architected and maintained a REST backend with Docker-based deployments, structured logging, and Prometheus observability.
- Established Git branching strategy, CI/CD pipelines via GitHub Actions, and documented deployment runbooks.

React REST API Docker Git GitHub Actions Prometheus

Full Stack Developer

2023 — Present

Fiverr

- Delivered 23+ full-cycle software products for international clients across project management, e-commerce, and SaaS verticals.
- Implemented event-driven backends with Spring Boot microservices, Redis caching, and PostgreSQL relational databases.
- Deployed and maintained applications on AWS (EC2, S3, RDS) with zero-downtime release processes.
- Maintained consistent 5-star client satisfaction through clear communication and reliable delivery.

React Spring Boot AWS Redis PostgreSQL Docker

PROJECTS

Eclipse — Event-Driven Project & Task Management Platform

subham59036/Eclipse

- Built a full-stack project management platform supporting multi-team workspaces with task assignment, priority levels, and deadline tracking.
- Implemented asynchronous real-time notifications using Redis pub/sub, enabling instant updates across connected clients without polling.
- Designed a live analytics dashboard with Grafana and Prometheus metrics, providing team velocity and completion-rate insights.
- Containerised the entire stack with Docker Compose; deployed to AWS with autoscaling policies and PostgreSQL RDS.

Java Spring Boot React PostgreSQL Redis Docker AWS Prometheus Grafana

Beakon — Event-Driven Stock Management Platform

subham59036/Beakon

- Developed a multi-outlet stock management system enabling owners to track suppliers, inventory levels, and expenses in a single dashboard.
- Integrated real-time event streaming for low-stock alerts and supply-chain anomaly notifications using Redis.
- Built web listing management module allowing product syncing across multiple online storefronts from a single admin interface.
- Implemented live analytics with custom KPI widgets, reducing manual reporting time for business operators.

Java Spring Boot React PostgreSQL Redis Docker AWS Prometheus Grafana

SKILLS

Languages	Java, JavaScript
Backend	Spring, REST API, Security, Event Driven Design
Frontend	React.js, HTML5, CSS3
Databases	PostgreSQL, Redis
Cloud & DevOps	AWS, Docker, GitHub Actions, Linux, Prometheus, Grafana
Tools	Git, GitHub, Maven

EDUCATION

Bachelor of Technology — Computer Science

2025 — 2029

Ideal Institute of Engineering

CGPA 8.0
